CONSERVATION CONVERSATIONS

URBAN SOIL HEALTH PROGRAM

The Indiana Association of Soil and Water Conservation Districts has a new program in 2021 that will promote a systematic conservation approach to agriculture in urban settings and with farmers otherwise new to agriculture. So how can this program help you or someone in your family here in Marshall County? We don't exactly have what's traditionally thought of as an "urban" setting. Most of Indiana is not urban, so besides helping residents of the larger towns and cities, how can this program benefit other Hoosiers? This program is designed to reach and assist a broad audience of traditionally underserved populations in agriculture. It can provide smaller farming operations with technical training in soil health practices including cover cropping, mulching, crop rotation, no-till / low till, nutrient management, and knowledge of native and beneficial plants and insects. Is there a possibility that you or someone you know would like to start a 5-acre vegetable market farm outside of town? Or with more concerns about the quality and availability of our own

food, maybe you just want to grow your own vegetables and even raise a little livestock, but have no idea of how to go about it? The regional director of this new program will be reaching out to us to start holding workshops and offering educational opportunities. Towns within our district might be interested in having a community garden or your church might like to grow produce for its members. There are so many possibilities! The IASWCD is here to help, we are here to help, just give us a call!

Flowers and produce grown by a non-profit small farm

USDA and the Marshall County SWCD prohibit discrimination in their programs on the basis of race, color, national origin, sex, religion, age, disability, political beliefs and marital or familial status.

SUMMER 2021

ADIOS y BUENA SUERTE, ERICA!

Ms. Erica Wyss, our watershed coordinator, who was with us on a CWI salary grant, has moved onward and upward! She has started her new position in Corydon, IN with the NRCS as a soil conservationist. We are in the process of hiring a new contract employee to manage the 319 Implementation grant that we were awarded. Erica wrote that grant and helped to find her replacement. We thank her for her hard work and dedication to conservation here in our district over the past 2 1/2 years. We were lucky to have her!

• • • • •

STILL HAVE THE DRILL!

The District still owns and maintains the Great Plains drill seeder. This piece of equipment is available for Marshall County residents to rent for pollinator habitat and food plot installation, as well as hay and pasture installation and renovation. It requires a 40 horse tractor with hydraulics to operate. The cost is \$50 plus \$6/acre. We are lucky to have this piece of equipment, there are many residents of other counties that wish their district had one available. We know it's still the middle of the summer, but don't wait too long to reserve for fall planting, fall will be here before we know it!

GO GREEN!

By scanning the QR code to the left with your smart phone you can send us an email letting us know you would like to help us save money on printing costs and postage by receiving your newsletter via email.

CLIMATE CHANGE!

Have you been wondering how climate changes could be affecting things around you? How are these changes affecting wetland, wildlife, the forests and common agricultural practices? Are there things that I could be doing or looking to do to adapt my farming operation to the changes that are occurring? You are in luck, the USDA- NRCS has webpages on the Indiana and National websites that give you some facts about Climate Variability and Adaptation. They also have some really good fact sheets that can give you information on practices that can help you adapt. Email us here at the office and we will forward those links to you.....info@marshallcountyswcd.org

POISON HEMLOCK! YIKES!

Informing our county residents about invasive plant issues is part of our job here at the Soil and Water office. This one is a BIGGIE, literally. Poison Hemlock is in bloom right now and easy to spot, some of them are 5/6' high! Mostly found along roadsides and fence rows that aren't maintained, it is extremely poisonous to animals and people. Care must always be taken to not come into close contact with it, it can cause serious skin rashes and blistering. If this is showing up on your property, you should be taking action. The most effective control may be mowing to prevent seed production, followed with herbicide applications to rosettes and resprouts. Herbicide application should be performed while the plant is actively growing and before flowering. First year basal rosettes may be sprayed from midsummer through fall. Purdue has a great publication on this, just search online for Purdue Extension Poison Hemlock.

It can provide smaller farming operations with technical training in soil health practices including cover cropping, mulching, crop rotation, no-till / low till, nutrient management, and knowledge of native and beneficial plants and insects. Is there a possibility that you or someone you know would like to start a 5-acre vegetable market farm outside of town? Or with more concerns about the quality and availability of our own

food, maybe you just want to grow your own vegetables and even raise a little livestock, but have no idea of how to go about it? The regional director of this new program will be reaching out to us to start holding workshops and offering educational opportunities. Towns within our district might be interested in having a community garden or your church might like to grow produce for its members. There are so many possibilities! The IASWCD is here to help, we are here to help, just give us a call!

Flowers and produce grown by a non-profit small farm

USDA and the Marshall County SWCD prohibit discrimination in their programs on the basis of race, color, national origin, sex, religion, age, disability, political beliefs and marital or familial status.

SUMMER 2021

ADIOS y BUENA SUERTE, ERICA!

Ms. Erica Wyss, our watershed coordinator, who was with us on a CWI salary grant, has moved onward and upward! She has started her new position in Corydon, IN with the NRCS as a soil conservationist. We are in the process of hiring a new contract employee to manage the 319 Implementation grant that we were awarded. Erica wrote that grant and helped to find her replacement. We thank her for her hard work and dedication to conservation here in our district over the past 2 1/2 years. We were lucky to have her!

• • • • •

STILL HAVE THE DRILL!

The District still owns and maintains the Great Plains drill seeder. This piece of equipment is available for Marshall County residents to rent for pollinator habitat and food plot installation, as well as hay and pasture installation and renovation. It requires a 40 horse tractor with hydraulics to operate. The cost is \$50 plus \$6/acre. We are lucky to have this piece of equipment, there are many residents of other counties that wish their district had one available. We know it's still the middle of the summer, but don't wait too long to reserve for fall planting, fall will be here before we know it!

GO GREEN!

By scanning the QR code to the left with your smart phone you can send us an email letting us know you would like to help us save money on printing costs and postage by receiving your newsletter via email.

CLIMATE CHANGE!

Have you been wondering how climate changes could be affecting things around you? How are these changes affecting wetland, wildlife, the forests and common agricultural practices? Are there things that I could be doing or looking to do to adapt my farming operation to the changes that are occurring? You are in luck, the USDA- NRCS has webpages on the Indiana and National websites that give you some facts about Climate Variability and Adaptation. They also have some really good fact sheets that can give you information on practices that can help you adapt. Email us here at the office and we will forward those links to you.....info@marshallcountyswcd.org

POISON HEMLOCK! YIKES!

Informing our county residents about invasive plant issues is part of our job here at the Soil and Water office. This one is a BIGGIE, literally. Poison Hemlock is in bloom right now and easy to spot, some of them are 5/6' high! Mostly found along roadsides and fence rows that aren't maintained, it is extremely poisonous to animals and people. Care must always be taken to not come into close contact with it, it can cause serious skin rashes and blistering. If this is showing up on your property, you should be taking action. The most effective control may be mowing to prevent seed production, followed with herbicide applications to rosettes and resprouts. Herbicide application should be performed while the plant is actively growing and before flowering. First year basal rosettes may be sprayed from midsummer through fall. Purdue has a great publication on this, just search online for Purdue Extension Poison Hemlock.

CONSERVATION CONVERSATIONS

URBAN SOIL HEALTH PROGRAM

The Indiana Association of Soil and Water Conservation Districts has a new program in 2021 that will promote a systematic conservation approach to agriculture in urban settings and with farmers otherwise new to agriculture. So how can this program help you or someone in your family here in Marshall County? We don't exactly have what's traditionally thought of as an "urban" setting. Most of Indiana is not urban, so besides helping residents of the larger towns and cities, how can this program benefit other Hoosiers? This program is designed to reach and assist a broad audience of traditionally underserved populations in agriculture. It can provide smaller farming operations with technical training in soil health practices including cover cropping, mulching, crop rotation, no-till / low till, nutrient management, and knowledge of native and beneficial plants and insects. Is there a possibility that you or someone you know would like to start a 5-acre vegetable market farm outside of town? Or with more concerns about the quality and availability of our own

SUMMER 2021

ADIOS y BUENA SUERTE, ERICA!

Ms. Erica Wyss, our watershed coordinator, who was with us on a CWI salary grant, has moved onward and upward! She has started her new position in Corydon, IN with the NRCS as a soil conservationist. We are in the process of hiring a new contract employee to manage the 319 Implementation grant that we were awarded. Erica wrote that grant and helped to find her replacement. We thank her for her hard work and dedication to conservation here in our district over the past 2 1/2 years. We were lucky to have her!

• • • • •

STILL HAVE THE DRILL!

The District still owns and maintains the Great Plains drill seeder. This piece of equipment is available for Marshall County residents to rent for pollinator habitat and food plot installation, as well as hay and pasture installation and renovation. It requires a 40 horse tractor with hydraulics to operate. The cost is \$50 plus \$6/acre. We are lucky to have this piece of equipment, there are many residents of other counties that wish their district had one available. We know it's still the middle of the summer, but don't wait too long to reserve for fall planting, fall will be here before we know it!

GO GREEN!

By scanning the QR code to the left with your smart phone you can send us an email letting us know you would like to help us save money on printing costs and postage by receiving your newsletter via email.

CLIMATE CHANGE!

Have you been wondering how climate changes could be affecting things around you? How are these changes affecting wetland, wildlife, the forests and common agricultural practices? Are there things that I could be doing or looking to do to adapt my farming operation to the changes that are occurring? You are in luck, the USDA- NRCS has webpages on the Indiana and National websites that give you some facts about Climate Variability and Adaptation. They also have some really good fact sheets that can give you information on practices that can help you adapt. Email us here at the office and we will forward those links to you.....info@marshallcountyswcd.org

POISON HEMLOCK! YIKES!

Informing our county residents about invasive plant issues is part of our job here at the Soil and Water office. This one is a BIGGIE, literally. Poison Hemlock is in bloom right now and easy to spot, some of them are 5/6' high! Mostly found along roadsides and fence rows that aren't maintained, it is extremely poisonous to animals and people. Care must always be taken to not come into close contact with it, it can cause serious skin rashes and blistering. If this is showing up on your property, you should be taking action. The most effective control may be mowing to prevent seed production, followed with herbicide applications to rosettes and resprouts. Herbicide application should be performed while the plant is actively growing and before flowering. First year basal rosettes may be sprayed from midsummer through fall. Purdue has a great publication on this, just search online for Purdue Extension Poison Hemlock.

CONSERVATION CONVERSATIONS

URBAN SOIL HEALTH PROGRAM

The Indiana Association of Soil and Water Conservation Districts has a new program in 2021 that will promote a systematic conservation approach to agriculture in urban settings and with farmers otherwise new to agriculture. So how can this program help you or someone in your family here in Marshall County? We don't exactly have what's traditionally thought of as an "urban" setting. Most of Indiana is not urban, so besides helping residents of the larger towns and cities, how can this program benefit other Hoosiers? This program is designed to reach and assist a broad audience of traditionally underserved populations in agriculture. It can provide smaller farming operations with technical training in soil health practices including cover cropping, mulching, crop rotation, no-till / low till, nutrient management, and knowledge of native and beneficial plants and insects. Is there a possibility that you or someone you know would like to start a 5-acre vegetable market farm outside of town? Or with more concerns about the quality and availability of our own

food, maybe you just want to grow your own vegetables and even raise a little livestock, but have no idea of how to go about it? The regional director of this new program will be reaching out to us to start holding workshops and offering educational opportunities. Towns within our district might be interested in having a community garden or your church might like to grow produce for its members. There are so many possibilities! The IASWCD is here to help, we are here to help, just give us a call!

Flowers and produce grown by a non-profit small farm

USDA and the Marshall County SWCD prohibit discrimination in their programs on the basis of race, color, national origin, sex, religion, age, disability, political beliefs and marital or familial status.

CLIMATE CHANGE!

Have you been wondering how climate changes could be affecting things around you? How are these changes affecting wetland, wildlife, the forests and common agricultural practices? Are there things that I could be doing or looking to do to adapt my farming operation to the changes that are occurring? You are in luck, the USDA- NRCS has webpages on the Indiana and National websites that give you some facts about Climate Variability and Adaptation. They also have some really good fact sheets that can give you information on practices that can help you adapt. Email us here at the office and we will forward those links to you.....info@marshallcountyswcd.org

POISON HEMLOCK! YIKES!

Informing our county residents about invasive plant issues is part of our job here at the Soil and Water office. This one is a BIGGIE, literally. Poison Hemlock is in bloom right now and easy to spot, some of them are 5/6' high! Mostly found along roadsides and fence rows that aren't maintained, it is extremely poisonous to animals and people. Care must always be taken to not come into close contact with it, it can cause serious skin rashes and blistering. If this is showing up on your property, you should be taking action. The most effective control may be mowing to prevent seed production, followed with herbicide applications to rosettes and resprouts. Herbicide application should be performed while the plant is actively growing and before flowering. First year basal rosettes may be sprayed from midsummer through fall. Purdue has a great publication on this, just search online for Purdue Extension Poison Hemlock.

CONSERVATION CONVERSATIONS

URBAN SOIL HEALTH PROGRAM

The Indiana Association of Soil and Water Conservation Districts has a new program in 2021 that will promote a systematic conservation approach to agriculture in urban settings and with farmers otherwise new to agriculture. So how can this program help you or someone in your family here in Marshall County? We don't exactly have what's traditionally thought of as an "urban" setting. Most of Indiana is not urban, so besides helping residents of the larger towns and cities, how can this program benefit other Hoosiers? This program is designed to reach and assist a broad audience of traditionally underserved populations in agriculture. It can provide smaller farming operations with technical training in soil health practices including cover cropping, mulching, crop rotation, no-till / low till, nutrient management, and knowledge of native and beneficial plants and insects. Is there a possibility that you or someone you know would like to start a 5-acre vegetable market farm outside of town? Or with more concerns about the quality and availability of our own

food, maybe you just want to grow your own vegetables and even raise a little livestock, but have no idea of how to go about it? The regional director of this new program will be reaching out to us to start holding workshops and offering educational opportunities. Towns within our district might be interested in having a community garden or your church might like to grow produce for its members. There are so many possibilities! The IASWCD is here to help, we are here to help, just give us a call!

Flowers and produce grown by a non-profit small farm

USDA and the Marshall County SWCD prohibit discrimination in their programs on the basis of race, color, national origin, sex, religion, age, disability, political beliefs and marital or familial status.

SUMMER 2021

ADIOS y BUENA SUERTE, ERICA!

Ms. Erica Wyss, our watershed coordinator, who was with us on a CWI salary grant, has moved onward and upward! She has started her new position in Corydon, IN with the NRCS as a soil conservationist. We are in the process of hiring a new contract employee to manage the 319 Implementation grant that we were awarded. Erica wrote that grant and helped to find her replacement. We thank her for her hard work and dedication to conservation here in our district over the past 2 1/2 years. We were lucky to have her!

• • • • •

STILL HAVE THE DRILL!

The District still owns and maintains the Great Plains drill seeder. This piece of equipment is available for Marshall County residents to rent for pollinator habitat and food plot installation, as well as hay and pasture installation and renovation. It requires a 40 horse tractor with hydraulics to operate. The cost is \$50 plus \$6/acre. We are lucky to have this piece of equipment, there are many residents of other counties that wish their district had one available. We know it's still the middle of the summer, but don't wait too long to reserve for fall planting, fall will be here before we know it!

POISON HEMLOCK! YIKES!

Informing our county residents about invasive plant issues is part of our job here at the Soil and Water office. This one is a BIGGIE, literally. Poison Hemlock is in bloom right now and easy to spot, some of them are 5/6' high! Mostly found along roadsides and fence rows that aren't maintained, it is extremely poisonous to animals and people. Care must always be taken to not come into close contact with it, it can cause serious skin rashes and blistering. If this is showing up on your property, you should be taking action. The most effective control may be mowing to prevent seed production, followed with herbicide applications to rosettes and resprouts. Herbicide application should be performed while the plant is actively growing and before flowering. First year basal rosettes may be sprayed from midsummer through fall. Purdue has a great publication on this, just search online for Purdue Extension Poison Hemlock.

CONSERVATION CONVERSATIONS

URBAN SOIL HEALTH PROGRAM

The Indiana Association of Soil and Water Conservation Districts has a new program in 2021 that will promote a systematic conservation approach to agriculture in urban settings and with farmers otherwise new to agriculture. So how can this program help you or someone in your family here in Marshall County? We don't exactly have what's traditionally thought of as an "urban" setting. Most of Indiana is not urban, so besides helping residents of the larger towns and cities, how can this program benefit other Hoosiers? This program is designed to reach and assist a broad audience of traditionally underserved populations in agriculture. It can provide smaller farming operations with technical training in soil health practices including cover cropping, mulching, crop rotation, no-till / low till, nutrient management, and knowledge of native and beneficial plants and insects. Is there a possibility that you or someone you know would like to start a 5-acre vegetable market farm outside of town? Or with more concerns about the quality and availability of our own

food, maybe you just want to grow your own vegetables and even raise a little livestock, but have no idea of how to go about it? The regional director of this new program will be reaching out to us to start holding workshops and offering educational opportunities. Towns within our district might be interested in having a community garden or your church might like to grow produce for its members. There are so many possibilities! The IASWCD is here to help, we are here to help, just give us a call!

Flowers and produce grown by a non-profit small farm

USDA and the Marshall County SWCD prohibit discrimination in their programs on the basis of race, color, national origin, sex, religion, age, disability, political beliefs and marital or familial status.

SUMMER 2021

ADIOS y BUENA SUERTE, ERICA!

Ms. Erica Wyss, our watershed coordinator, who was with us on a CWI salary grant, has moved onward and upward! She has started her new position in Corydon, IN with the NRCS as a soil conservationist. We are in the process of hiring a new contract employee to manage the 319 Implementation grant that we were awarded. Erica wrote that grant and helped to find her replacement. We thank her for her hard work and dedication to conservation here in our district over the past 2 1/2 years. We were lucky to have her!

• • • • •

STILL HAVE THE DRILL!

The District still owns and maintains the Great Plains drill seeder. This piece of equipment is available for Marshall County residents to rent for pollinator habitat and food plot installation, as well as hay and pasture installation and renovation. It requires a 40 horse tractor with hydraulics to operate. The cost is \$50 plus \$6/acre. We are lucky to have this piece of equipment, there are many residents of other counties that wish their district had one available. We know it's still the middle of the summer, but don't wait too long to reserve for fall planting, fall will be here before we know it!

GO GREEN!

By scanning the QR code to the left with your smart phone you can send us an email letting us know you would like to help us save money on printing costs and postage by receiving your newsletter via email.

CLIMATE CHANGE!

Have you been wondering how climate changes could be affecting things around you? How are these changes affecting wetland, wildlife, the forests and common agricultural practices? Are there things that I could be doing or looking to do to adapt my farming operation to the changes that are occurring? You are in luck, the USDA- NRCS has webpages on the Indiana and National websites that give you some facts about Climate Variability and Adaptation. They also have some really good fact sheets that can give you information on practices that can help you adapt. Email us here at the office and we will forward those links to you.....info@marshallcountyswcd.org

Care must always be taken to not come into close contact with it, it can cause serious skin rashes and blistering. If this is showing up on your property, you should be taking action. The most effective control may be mowing to prevent seed production, followed with herbicide applications to rosettes and resprouts. Herbicide application should be performed while the plant is actively growing and before flowering. First year basal rosettes may be sprayed from midsummer through fall. Purdue has a great publication on this, just search online for Purdue Extension Poison Hemlock.

CONSERVATION CONVERSATIONS

URBAN SOIL HEALTH PROGRAM

The Indiana Association of Soil and Water Conservation Districts has a new program in 2021 that will promote a systematic conservation approach to agriculture in urban settings and with farmers otherwise new to agriculture. So how can this program help you or someone in your family here in Marshall County? We don't exactly have what's traditionally thought of as an "urban" setting. Most of Indiana is not urban, so besides helping residents of the larger towns and cities, how can this program benefit other Hoosiers? This program is designed to reach and assist a broad audience of traditionally underserved populations in agriculture. It can provide smaller farming operations with technical training in soil health practices including cover cropping, mulching, crop rotation, no-till / low till, nutrient management, and knowledge of native and beneficial plants and insects. Is there a possibility that you or someone you know would like to start a 5-acre vegetable market farm outside of town? Or with more concerns about the quality and availability of our own

food, maybe you just want to grow your own vegetables and even raise a little livestock, but have no idea of how to go about it? The regional director of this new program will be reaching out to us to start holding workshops and offering educational opportunities. Towns within our district might be interested in having a community garden or your church might like to grow produce for its members. There are so many possibilities! The IASWCD is here to help, we are here to help, just give us a call!

Flowers and produce grown by a non-profit small farm

USDA and the Marshall County SWCD prohibit discrimination in their programs on the basis of race, color, national origin, sex, religion, age, disability, political beliefs and marital or familial status.

SUMMER 2021

ADIOS y BUENA SUERTE, ERICA!

Ms. Erica Wyss, our watershed coordinator, who was with us on a CWI salary grant, has moved onward and upward! She has started her new position in Corydon, IN with the NRCS as a soil conservationist. We are in the process of hiring a new contract employee to manage the 319 Implementation grant that we were awarded. Erica wrote that grant and helped to find her replacement. We thank her for her hard work and dedication to conservation here in our district over the past 2 1/2 years. We were lucky to have her!

• • • • •

STILL HAVE THE DRILL!

The District still owns and maintains the Great Plains drill seeder. This piece of equipment is available for Marshall County residents to rent for pollinator habitat and food plot installation, as well as hay and pasture installation and renovation. It requires a 40 horse tractor with hydraulics to operate. The cost is \$50 plus \$6/acre. We are lucky to have this piece of equipment, there are many residents of other counties that wish their district had one available. We know it's still the middle of the summer, but don't wait too long to reserve for fall planting, fall will be here before we know it!

GO GREEN!

By scanning the QR code to the left with your smart phone you can send us an email letting us know you would like to help us save money on printing costs and postage by receiving your newsletter via email.

CLIMATE CHANGE!

Have you been wondering how climate changes could be affecting things around you? How are these changes affecting wetland, wildlife, the forests and common agricultural practices? Are there things that I could be doing or looking to do to adapt my farming operation to the changes that are occurring? You are in luck, the USDA- NRCS has webpages on the Indiana and National websites that give you some facts about Climate Variability and Adaptation. They also have some really good fact sheets that can give you information on practices that can help you adapt. Email us here at the office and we will forward those links to you.....info@marshallcountyswcd.org

So how can this program help you or someone in your family here in Marshall County? We don't exactly have what's traditionally thought of as an "urban" setting. Most of Indiana is not urban, so besides helping residents of the larger towns and cities, how can this program benefit other Hoosiers? This program is designed to reach and assist a broad audience of traditionally underserved populations in agriculture. It can provide smaller farming operations with technical training in soil health practices including cover cropping, mulching, crop rotation, no-till / low till, nutrient management, and knowledge of native and beneficial plants and insects. Is there a possibility that you or someone you know would like to start a 5-acre vegetable market farm outside of town? Or with more concerns about the quality and availability of our own

food, maybe you just want to grow your own vegetables and even raise a little livestock, but have no idea of how to go about it? The regional director of this new program will be reaching out to us to start holding workshops and offering educational opportunities. Towns within our district might be interested in having a community garden or your church might like to grow produce for its members. There are so many possibilities! The IASWCD is here to help, we are here to help, just give us a call!

Flowers and produce grown by a non-profit small farm

USDA and the Marshall County SWCD prohibit discrimination in their programs on the basis of race, color, national origin, sex, religion, age, disability, political beliefs and marital or familial status.

SUMMER 2021

ADIOS y BUENA SUERTE, ERICA!

Ms. Erica Wyss, our watershed coordinator, who was with us on a CWI salary grant, has moved onward and upward! She has started her new position in Corydon, IN with the NRCS as a soil conservationist. We are in the process of hiring a new contract employee to manage the 319 Implementation grant that we were awarded. Erica wrote that grant and helped to find her replacement. We thank her for her hard work and dedication to conservation here in our district over the past 2 1/2 years. We were lucky to have her!

• • • • •

STILL HAVE THE DRILL!

The District still owns and maintains the Great Plains drill seeder. This piece of equipment is available for Marshall County residents to rent for pollinator habitat and food plot installation, as well as hay and pasture installation and renovation. It requires a 40 horse tractor with hydraulics to operate. The cost is \$50 plus \$6/acre. We are lucky to have this piece of equipment, there are many residents of other counties that wish their district had one available. We know it's still the middle of the summer, but don't wait too long to reserve for fall planting, fall will be here before we know it!

GO GREEN!

By scanning the QR code to the left with your smart phone you can send us an email letting us know you would like to help us save money on printing costs and postage by receiving your newsletter via email.

CLIMATE CHANGE!

Have you been wondering how climate changes could be affecting things around you? How are these changes affecting wetland, wildlife, the forests and common agricultural practices? Are there things that I could be doing or looking to do to adapt my farming operation to the changes that are occurring? You are in luck, the USDA- NRCS has webpages on the Indiana and National websites that give you some facts about Climate Variability and Adaptation. They also have some really good fact sheets that can give you information on practices that can help you adapt. Email us here at the office and we will forward those links to you.....info@marshallcountyswcd.org

POISON HEMLOCK! YIKES!

Informing our county residents about invasive plant issues is part of our job here at the Soil and Water office. This one is a BIGGIE, literally. Poison Hemlock is in bloom right now and easy to spot, some of them are 5/6' high! Mostly found along roadsides and fence rows that aren't maintained, it is extremely poisonous to animals and people. Care must always be taken to not come into close contact with it, it can cause serious skin rashes and blistering. If this is showing up on your property, you should be taking action. The most effective control may be mowing to prevent seed production, followed with herbicide applications to rosettes and resprouts. Herbicide application should be performed while the plant is actively growing and before flowering. First year basal rosettes may be sprayed from midsummer through fall. Purdue has a great publication on this, just search online for Purdue Extension Poison Hemlock.
